It is creditable because this is a well-known website with data from credible sources created by someone who produces frequent data sets used by big companies.

I am interested in this data to see if there is any correlation with attendance based on year, major, or hours of sleep

Hi Gracie, I came across this dataset for my stats class and thought it would be interesting to look at college student attendance. The dataset is from Kaggle and includes information about student attendance and other academic factors. I am planning to focus on attendance rates and how they may relate to students' academic performance. I think this will be an interesting way to explore whether being present in class has an impact on grades. All of the information can be found in the dataset I'm uploading here.
